

Earthquake Prediction

May 24, 2019

1 LANL Earthquake Prediction

1.0.1 1.1 Description

Forecasting earthquakes is one of the most important problems in Earth science because of their devastating consequences. Current scientific studies related to earthquake forecasting focus on three key points: when the event will occur, where it will occur, and how large it will be.

The goal of the challenge is to capture the physical state of the laboratory fault and how close it is from failure from a snapshot of the seismic data it is emitting. You will have to build a model that predicts the time remaining before failure from a chunk of seismic data, like we have done in our first paper above on easier data.

The input is a chunk of 0.0375 seconds of seismic data (ordered in time), which is recorded at 4MHz, hence 150'000 data points, and the output is time remaining until the following lab earthquake, in seconds.

The seismic data is recorded using a piezoceramic sensor, which outputs a voltage upon deformation by incoming seismic waves. The seismic data of the input is this recorded voltage, in integers.

Both the training and the testing set come from the same experiment. There is no overlap between the training and testing sets, that are contiguous in time.

Time to failure is based on a measure of fault strength (shear stress, not part of the data for the competition). When a labquake occurs this stress drops unambiguously.

The data is recorded in bins of 4096 samples. Within those bins seismic data is recorded at 4MHz, but there is a 12 microseconds gap between each bin, an artifact of the recording device.

1.1 Problem Statement:

To predict the time remaining before laboratory earthquakes occur from real-time seismic data.

1.2 Sources <https://www.kaggle.com/c/LANL-Earthquake-Prediction>
<https://www.kaggle.com/c/LANL-Earthquake-Prediction/discussion>

2. Machine Learning problem

1.1.1 2.1 Data

train.csv - A single, continuous training segment of experimental data.

1.1.2 2.1.1 Data Overview

train.csv contains 2 columns: acoustic_data - the seismic signal [int16] time_to_failure - the time (in seconds) until the next laboratory earthquake [float64] Number of rows in Train.csv = 629145480

1.1.3 2.2.1 Type of Machine Learning Problem

It is a Regression problem, for a given chunk of seismic data we need to predict the time remaining before laboratory earthquakes occur

2.2.2 Performance Metric Source: <https://www.kaggle.com/c/LANL-Earthquake-Prediction#evaluation> Metric(s): Mean Absolute Error

```
In [1]: from tqdm import tqdm_notebook

2 Exploratory Data Analysis

I have used several kernels from kaggle and ideas from discussion threads .
<https://www.kaggle.com/vettejeep/masters-final-project-model-lb-1-392>
<https://www.kaggle.com/allunia/shaking-earth> <https://www.kaggle.com/gpreda/lanl-earthquake-eda-and-prediction>

```
In [7]: train = pd.read_csv('train.csv', dtype={'acoustic_data': np.int16, 'time_to_failure': np.float64})
```

```
In [99]: train.shape
```

```
Out[99]: (629145480, 2)
```

There are 6.2 billion datapoints

```
In [98]: # to show all the decimal points
pd.options.display.precision = 15
train.head()
```

```
Out[98]:
```

	acoustic_data	time_to_failure
0	12	1.4690999832
1	6	1.4690999821
2	8	1.4690999810
3	5	1.4690999799
4	8	1.4690999788

We can see that for each sample the time to failure decreases by 1.1×10^{-9}

```
In [42]: train.describe()
```

```
Out[42]:
```

	acoustic_data	time_to_failure
count	6.291455e+08	6.291455e+08
mean	4.519468e+00	5.678292e+00
std	1.073571e+01	3.672697e+00
min	-5.515000e+03	9.550396e-05
25%	2.000000e+00	2.625997e+00
50%	5.000000e+00	5.349798e+00
75%	7.000000e+00	8.173396e+00
max	5.444000e+03	1.610740e+01

75% of the acoustic data is below 7 and the max value is 5.4×10^3 , i.e. only few values are approximately 5.4×10^3

2.0.1 Visualizing Train data

2.0.2 Number of occurrences of Earthquake

```
In [5]: #plotting the train data
fig, ax = plt.subplots(2,1, figsize=(15,12))
ax[0].plot(train.index.values, train.time_to_failure.values, c="darkred")
ax[0].set_title("Time to failure")
ax[0].set_xlabel("Index")
ax[0].set_ylabel("Time to failure");
ax[1].plot(train.index.values, train.acoustic_data.values, c="blue")
#ax[1].set_title("Index")
ax[1].set_xlabel("Index")
ax[1].set_ylabel("Acoustic Signal")
plt.show()
```

It is given that the earthquake occurs when the time_to_failure hits 0, hence we can count that there are 16 occurrences of earthquake in the whole training data

2.0.3 Relationship between time to failure and acoustic data

```
In [4]: #plotting acoustic data vs time to failure
fig, ax1 = plt.subplots(figsize=(12, 8))
plt.plot(train.acoustic_data,color='r')
plt.legend()
ax1.set_ylabel('acoustic data',color='r')
ax2=ax1.twinx()
ax2.set_ylabel('time to failure',color='b')
plt.plot(train.time_to_failure,color='b')
plt.title('acoustic data vs time to failure')
plt.legend()
plt.show()
```

The acoustic data has a peak just before time to failure hits zero. We can verify it by zooming into the plot.

```
In [5]: #plotting only top 1% of the value
fig, ax1 = plt.subplots(figsize=(12, 8))
plt.plot(train.acoustic_data[0:6000000],color='r')
plt.legend()
ax1.set_ylabel('acoustic data',color='r')
ax2=ax1.twinx()
ax2.set_ylabel('time to failure',color='b')
plt.plot(train.time_to_failure[0:6000000],color='b')
plt.title('Visualizing top 1% of the data')
```

```
plt.legend()
plt.show()
```

If we zoom into the data we can see that the acoustic data has a peak just before the earthquake occurs and the whole training data follows the same pattern

2.0.4 Is time to failure continuously Decreasing

```
In [3]: #plotting time to failure for fewer data
fig = plt.figure(figsize=(15, 6))
plt.subplot(1,2,1)

plt.plot(train.time_to_failure[0:1000000])
plt.title('time to failure for 1000000 points')
plt.xlabel('number of points')
plt.ylabel('time_to_failure')

plt.subplot(1,2,2)
plt.plot(train.time_to_failure[0:10000])
plt.xlabel('number of points')
plt.ylabel('time_to_failure')
plt.title('time to failure for 10000 points')

plt.show()
```

If we plot the data for 1000000 points we can see that the graph is continuously decreasing but if we zoom into it we can see that the time_to_failure stops decreasing for a while when it reaches ~4000 samples. It is due to the fact that the data is recorded in bins of 4096 samples and the recording device stops for 12 microseconds after each bin.

2.0.5 Visualizing Test Data

```
In [36]: #Reading the test data
from tqdm.auto import tqdm
submission = pd.read_csv('sample_submission.csv', index_col='seg_id')
test = pd.DataFrame(dtype=np.float64, index=submission.index)
whole_test=[]
for seg_id in tqdm(test.index):
    seg = pd.read_csv('Untitled Folder/' + seg_id + '.csv')
    for i in seg['acoustic_data'].values:
        whole_test.append(i)
```

```
HBox(children=(IntProgress(value=0, max=2624), HTML(value='')))
```

```
In [40]: #total number of datapoints in test
len(whole_test)
```

```
Out[40]: 393600000
```

```
In [39]: #plotting test data
fig = plt.figure(figsize=(14, 8))

plt.plot(whole_test,color='r',label='acoustic_data')
plt.title('Test Acoustic data')
plt.xlabel('number of points')
plt.ylabel('acoustic data')
```

```
plt.legend()
plt.show()
```

Checking for Null values

```
In [41]: train.isnull().any().any()
```

```
Out[41]: False
```

There are no null values in the whole training data

3 Featurization

3.0.1 Feature set 1

```
In [2]: OUTPUT_DIR = '' # set for local environment
        DATA_DIR = '' # set for local environment
```

```
SIG_LEN = 150000
NUM_SEG_PER_PROC = 4000
NUM_THREADS = 6
```

```
NY_FREQ_IDX = 75000 # the test signals are 150k samples long, Nyquist is thus 75k.
CUTOFF = 18000
MAX_FREQ_IDX = 20000
FREQ_STEP = 2500
```

```

In [ ]: # into 6 slices
def split_raw_data():
    df = pd.read_csv(os.path.join(DATA_DIR, 'train.csv'))

6.1 Conclusion

Objective: To predict the time remaining before laboratory earthquakes occur from real-time seismic data.

1. We are given a dataset with 629145480 rows and 2 columns: acoustic_data, time_to_failure, where time_to_failure is the time remaining for next earthquake.
2. We visualize the train and test data to get the pattern and observe that there is a spike in seismic data before earthquake occurs and there are a total of 16 earthquakes in train data.
3. We divide the data into 6 slices and take 4000 random samples from each slice and get 24000 training data rows. We use multiprocessing to reduce the time taken to run.
4. We then featurize the data using simple statistical features like mean, std, moving averages etc and also signal processing features like fft, peaks, hjorth parameters.
5. I tried hyperparameter tuning with gridsearchcv and the performance reduced, we can also see by results that CV is not reliable, hence I used the default values.
6. We apply various machine learning models, we use 8 fold cv compare the cross validation result and plot the corresponding feature importances.
7. Since not all features contribute to the model, we use feature selection to get the top features.
8. We use sklearn's selectkbest to find the top 300 features and then apply models on it and compare them, the score went down slightly.

```

In [1]: from prettytable import PrettyTable

```

```

x=PrettyTable()

```

```

x.field_names=['Feature Selection','Feature set','Algorithm','CV MAE','TEST MAE']
x.add_row([" - ", 'Feature set1', "XGB", 1.209, 1.362])
x.add_row([" - ", 'Feature set1', "LGBM", 1.218, 1.340])
x.add_row([" selectkbest ", 'Feature set1+2', "LGBM", 1.325, 1.455])
x.add_row(["-", 'Feature set1+2', "LGBM", 1.199, 3.51])

```

```

print(x)

```

```

+-----+-----+-----+-----+-----+
| Feature Selection | Feature set | Algorithm | CV MAE | TEST MAE |
+-----+-----+-----+-----+-----+
|      -           | Feature set1 |    XGB    | 1.209  | 1.362    |
|      -           | Feature set1 |    LGBM    | 1.218  | 1.34     |

```

	selectkbest		Feature set1+2		LGBM		1.325		1.455	
	-		Feature set1+2		LGBM		1.199		3.51	
+-----+-----+-----+-----+										

We can see that cv might not be reliable
 LGBM gives the highest score of 1.340 which is currently at the 37th position at the kaggle public leaderboard.
